UNDERSTANDING VIOLENCE AND PREVENTION DURING A PANDEMIC

California news about guns, gun violence, and firearm suicide
2020-2021
Gun violence and firearm suicide are preventable — but news coverage often obscures that fact: We know from decades of research that, in general, news coverage of different kinds of violence can stoke fear by focusing narrowly on the details of the most extreme cases, obscuring solutions, and reinforcing the sense that the problem is inescapable and unchangeable.

That’s why a key component of stopping gun violence and firearm suicide in America is understanding the complete picture of these public health crises, as well as what can be done — and is being done — in communities across the country to prevent harm or support survivors of violence.

In 2020, discussions about violence, and gun violence in particular, took on new importance as the global COVID-19 pandemic spurred historic increases in gun sales and concerns about mental health and family violence among families and individuals in quarantine. Following the murder of George Floyd by Minneapolis police in the summer of 2020, nationwide protests against police brutality and structural racism put police violence and officer-involved shootings in the spotlight.

We wanted to know: How have gun violence and firearm suicide appeared in California news amid the unprecedented events of 2020 and early 2021? And how has coverage of gun violence changed over the past several years, since our last study of this issue?

How have gun violence and firearm suicide appeared in California news amid the pandemic and nationwide protests about police brutality?

How has the volume of news coverage about gun violence changed in recent years?

What types of gun violence receive the most coverage?

At Berkeley Media Studies Group, we believe that the news provides an important window into public discourse and has a strong influence on what people and policymakers understand and how they understand it. We wanted to know: How have gun violence and firearm suicide appeared in California news amid the unprecedented events of 2020 and early 2021? And how has coverage of gun violence changed over the past several years, since our last study of this issue?
We present here a quantitative analysis of California news published between January 1, 2020 and June 30, 2021. These findings build in part on a study we released in June of 2018 titled “More Than Mass Shootings: Gun Violence Narratives in California News,” part of a long-term partnership between BMSG and the Hope and Heal Fund focused on examining and shifting the news narrative around gun violence and firearm suicide. That report evaluated California news about three major types of day-to-day gun violence, including firearm suicide, domestic violence incidents involving guns, and community-level violence (also known as street violence) involving guns.

Our analysis found significant gaps in the coverage, such as limited news about firearm suicide and domestic violence involving guns, and the persistent use of language and images in the news that could reinforce harmful stereotypes about communities of color, particularly young Black and Brown men. That analysis also surfaced gaps in news coverage of police-involved acts of gun violence, though that issue was not a major focus of the report.

The following analysis not only documents how often the issues from our previous analysis (gun-related suicide, domestic violence, and community violence) appeared in English- and Spanish-language news; we also expanded the scope of this study to explore gun sales and police violence in response to a surge in the number of guns in circulation and the Black Lives Matter movement building the largest protests in U.S. history.
WHAT WE DID

We searched the Lexis-Nexis database for print and online news published between January 1, 2020 and June 30, 2021 in 118 English- and Spanish-language California newspapers. We selected these dates to capture the impact of various gun violence incidents on the news cycle: the statewide stay-at-home order (March 19, 2020); police killing of George Floyd in Minneapolis (May 25, 2020); the attack on the U.S. Capitol by armed supporters of Donald Trump (January 6, 2021); and mass shootings in an Atlanta spa and a Boulder grocery store that took place within one week (March 16, 2021 and March 22, 2021).

To enable comparisons with our prior research, we replicated the search terms we used in our prior study to capture English-language articles about domestic violence, community violence, and suicide related to guns. We updated our previous search terms for Spanish-language articles to be more comprehensive.

We also designed new search strings to capture news about topics we didn’t explore in the previous analysis: news about gun sales, particularly among first-time buyers, and stories about police violence, including shootings and any use of deadly force. We collected these stories over the same time period and evaluated the volume of coverage these search terms would have yielded had we run them during the prior study period (October 15, 2016 to October 14, 2017).

For English-language news, we searched for keywords related to issues like racism, prevention, and community action in the lead paragraphs of stories (see Appendix 1 for a complete list of keywords). For each keyword, we searched for variations, including alternate spellings, hyphenated and singular versions (e.g., to search for “shootings,” we searched for “shooting,” “shoot,” and “shot”). We documented the number of articles that included at least one mention of a keyword in the lead paragraph. We did not conduct keyword searches in Spanish because of the low volume of coverage.
WHAT WE FOUND

Our searches retrieved a total of 19,173 articles (English n=17,615 and Spanish n=1,558) about community or domestic violence involving guns, firearm suicide, police violence involving guns, or gun sales published in California newspapers between January 1, 2020 and June 30, 2021. Stories about police violence dominated English news, while Spanish-language news mostly focused on community-level violence (see Figure 1).

Note: Due to the limited volume of Spanish-language news, we combined Spanish and English-language results for the remainder of the report, unless otherwise noted.
We compared the volume of news coverage to our previous analyses.

News coverage of community violence, domestic violence, and suicide in California newspapers was higher in 2020-21 compared to 2016-17: Between January 1, 2020 and June 30, 2021, we found 8,092 articles about gun-related community violence, domestic violence, or suicide — an average of 450 stories per month, compared to an average of 318 stories per month during the sample period of the previous study (see Figure 2).

The results of retrospective searches for news about police violence and gun sales show that the combined volume of coverage for these topics increased as well. News about police violence accounts for most of this increase; news about gun sales remained relatively stable across time periods, perhaps because both studies included election years when coverage of gun sales was elevated.9,10
News related to gun violence made up about 2% of all English- and Spanish-language news stories published during 2020-21 (see Figure 3). From 2016-17 to 2020-21, Spanish-language news increased by 60%, while English-language news increased by 25.

Note: We searched for commonly used words like “and,” “or,” and “the” (and their Spanish-language translations) to determine the total volume of English- and Spanish-language news published in California during the study period.
English-language news about guns was published around the state.

Most gun-related news stories were concentrated in California’s top outlets: *The East Bay Times* (2,327 articles), *The Mercury News* (2,212 articles), *San Francisco Chronicle* (1,712 articles), *Los Angeles Times* (1,037 articles), *The San Diego Union-Tribune* (592 articles), and *The Sacramento Bee* (520 articles). However, there was robust local coverage throughout the state (see Figure 4). Most Spanish-language news came from one outlet in Southern California, *La Opinión* (97% of 1,558 Spanish-language stories).

*Exclusions: To assess how often gun violence and firearm suicide news appeared in California outlets apart from the major outlets, which otherwise dominated the coverage, we excluded from this table California’s highest-circulation news outlets. We also excluded from our analysis the wire service City News Service because of the potential duplication/reprints of articles from other outlets and the national online publication Salon.com, which is based in but not centered on California.

A growing number of journalists are elevating prevention in news about gun violence.

One in 10 English-language news stories mentioned prevention.

After conducting our keyword search across English-language news, we found that approximately one in 10 stories included some reference to “prevention” in the lead paragraph (11% of articles); in our previous analysis, only 3% of articles mentioned prevention. “Accountability” appeared in 5% and “justice” appeared in 3% of leads.
Guns and domestic violence and firearm suicide rarely appeared in the news.

As we observed in our previous analysis, the volume of news about community violence dwarfed news about domestic violence or suicide in both English- and Spanish-language news. Between January 1, 2020 and June 30, 2021, there were 4,599 articles about community violence, but only 1,771 articles about suicide, and 1,722 articles about domestic violence (see Figure 5).

A qualitative analysis of headlines showed that news about community violence peaked in April 2021, as communities braced for protests and reactions to the Derek Chauvin trial verdict for the murder of George Floyd. Domestic violence news peaked in January 2021 because of reports of surges in gun-related homicides and increases in domestic violence incidents. News about firearm suicide peaked in April 2021 when President Biden addressed the issue as part of new gun control actions.

**FIGURE 5**

All articles about guns related to community violence, domestic violence, and suicide in California newspapers, January 1, 2020 – June 30, 2021

(English n=7,185 and Spanish n=907)
California news about police violence notably increased and peaked during the summer of 2020.

We found 8,948 articles about police violence, police shootings, and the use of deadly force by police published during the study period — by far the highest volume of any topic. News about police violence peaked in June 2020 after the murder of George Floyd, when coverage increased nearly sixfold compared to prior months: This month alone accounted for nearly one-quarter of all police violence news. Coverage of police violence and deadly force then fell by two-thirds in the months following Floyd’s murder, though it peaked again in April 2021 during the trial of former police officer Derek Chauvin, who became the first white officer to be convicted of the murder of a Black person in Minnesota.13

Though our analysis focused on all types of police violence and use of deadly force, two-thirds of stories about police violence (67%) used the term “shooting” in the lead paragraph. Additionally, 59% of stories mentioned “killings” in the lead paragraph, 50% mentioned “force” (most commonly described as “excessive,” rather than “deadly” or “lethal”), and 28% mentioned “murder.” Only 7% of articles mentioned “officer-involved shooting” or “police-involved shooting” — a phrase used by police to “obscure accountability and basic clarity.”14

We also explored how community actions in response to police violence were characterized in California news. As we found in a separate analysis,15 the kind of language reporters use to describe community-led actions have important implications for their framing — whether they are deemed legitimate or disruptive, peaceful or violent, etc. In the current study, we found that 42% of articles mentioned “protests” in the lead paragraph, while 15% mentioned “demonstrations,” 12% described “riots,” and 8% used the term “looting.”
We evaluated whether the news included calls to action, references to solutions, or demands for accountability of police officers and changes to the law enforcement system. Specifically, we focused on calls to reform, defund, or abolish the police: 20% of articles mentioned “reform,” 9% mentioned “defund,” and just 2% used any variation of the phrase “abolish.”

Given the disproportionate impact of police violence on Black, Indigenous, and people of color, we explored how racism appeared in stories. We found that 25% of lead paragraphs mentioned “racism,” while less than 1% mentioned “white supremacy.”

Coverage of gun sales was similar to previous years and paralleled trends in news about firearm suicide.

We found 2,133 articles about gun sales during our study period, almost one-third of which explicitly referenced the pandemic in the lead paragraph (29% of articles). Coverage of gun sales peaked in March 2020, likely due to the COVID-19 pandemic and stay-home orders. News peaked again because of election season (October 2020), back-to-back mass shootings (March 2021), and the controversial overturn of the California state ban on assault weapons (June 2021).
Research has documented an uptick in first-time gun ownership among people of color. We wondered whether this shift was reflected in the news — that is, whether news stories focused on gun purchases by white males or if Black, Indigenous, and people of color were also mentioned in stories about buying guns. Almost one-third of stories about gun sales in California explicitly mentioned Black or African-American gun buyers in the lead paragraph. By contrast, white buyers were mentioned in 21% of lead paragraphs. Only 9% of lead paragraphs mentioned Latino buyers, 4% mentioned Asian purchasers, and just 1% mentioned Hispanic or Spanish-speaking people.

We also observed striking parallels between coverage of gun sales and coverage of firearm suicide. Across the study period, peaks in news about gun sales were closely followed by peaks in news about gun-related suicide, most visibly seen in March/June 2020, October/November 2020, and March/April 2021.
Our analysis of California news about gun-related violence and gun sales showed that:

- Coverage of firearm suicide and all forms of gun violence in California news has increased since our previous analysis.

- Sensational or high-profile events continue to spur peaks in coverage of gun violence, followed by declines. These patterns could mask trends in day-to-day gun violence and firearm suicide.

- Stories about police violence dominated English-language news and peaked amid national protests in the summer of 2020 following the murder of George Floyd. However, coverage quickly returned to baseline levels in the following months.

- There was significantly less Spanish- than English-language news about gun violence, police violence, and gun sales, almost all of which came from one outlet. Our findings align with research documenting declining circulation in Spanish-language print media in the U.S.,18 as well as Latinx communities’ growing use of social media19 and messaging apps20 for news.

- Despite record numbers of first-time firearm purchases, coverage of gun sales did not markedly increase since our previous analysis, possibly because both analysis periods included presidential elections, when gun sales — and potentially related news coverage — tend to spike.21

CONCLUSION
RECOMMENDATIONS FOR ADVOCATES

MONITOR THE MEDIA
Be aware of when gun violence is — and isn’t — in the news, how it is framed, who is quoted, and whether and how solutions and community action appear in the coverage. Tools like Google Alerts, newsletters, or email alerts from local outlets can help you stay abreast of news about gun violence, gun sales, firearm suicide, and related issues in your community and beyond. Remember to monitor English- and Spanish-language media if Spanish-language outlets are important for your work and your community. In addition to print news, consider monitoring social media outlets, radio, and television.

BE PREPARED TO PIGGYBACK OFF BREAKING NEWS
Journalists continually report on issues related to guns. As a result, there are many opportunities to pitch stories or contribute opinion pieces that “piggyback” off of attention to guns. Piggybacking is a way for advocates to add more context about the causes of gun violence in their own communities, highlight ways to prevent violence before it starts, and expand the frame to elevate equitable, community-led solutions.

BUILD RELATIONSHIPS WITH REPORTERS
Advocates can become trusted sources for reporters when they build long-term relationships. When journalists are aware of you, your work, and your networks, it will be easier to pitch them opinion pieces or news stories that broaden the frame around gun violence. They will also be more likely to turn to you as a source when they need to report on stories about gun violence and firearm suicide. Remember to connect with Spanish-language reporters if their outlets are important for your work. Think about social media, radio, and TV outlets, especially if print outlets are limited.

Changing the discourse around violence can seem overwhelming, but as the country grapples with difficult conversations about race, violence, and community against the backdrop of the ongoing pandemic, the public narrative around these issues is in flux. We know that community residents, public health practitioners, and others are working to shift the discourse in California toward narratives that elevate prevention, multisector partnerships, and community leadership rooted in principles of racial equity. We hope that these updated findings provide valuable information about the news landscape that can support and inform these leaders in their efforts to make every community healthier, safer, and more just.
